

The Franklin Standards: Testimonials

The National Association of Scholars has prepared the *Franklin Standards* to give a measuring stick of what is to be done to cure the scientific illiteracy in schools K-12. In these dumb-downed times, the standards are balanced, nourishing, and fair-minded. They stress independent learning and critical thinking. What NAS has done for higher education with its [*Curriculum of Liberty*](#), they have done for the high schools at all levels. It is a remarkable achievement.

Robert Paquette

President

The Alexander Hamilton Institute for the Study of Western Civilization

Science education in elementary and secondary schools is essential. Colleges and universities cannot educate future doctors, nurses, engineers, and scientists unless our K-12 schools lay a firm foundation of scientific understanding and knowledge. *The Franklin Standards* are a blueprint for doing so.
